

Instructions for loading a Yachtbroker 2000 Upgrade v30

WARNING BEFORE ATTEMPTING TO INSTALL THE UPGRADE PLEASE READ THESE INSTRUCTIONS AND PHONE MARINE & LEISURE SOLUTIONS TO SEE THAT THEY ARE IN A POSITION TO GIVE YOU AN INSTALLATION CODE. THIS UPDATE REQUIRES WINZIP TO BE LOADED TO YOUR MACHINE. PLEASE INSTALL THIS BEFORE PROCEEDING TO THE INSTALLATION.

1. Make a backup of your Yachtbroker data files ybdatag.mdb, ybdatac.mdb, ybdatay.mdb . If you have a stand alone version of Yachtbroker these will be in C:\ybpro32 if you are on a network then please ask you administrator where these files are located.
2. Download from the download section of the www.yachtbroker.co.uk website the file YB2kv30.zip remembering to select to save to disk making sure that you select to download it to a place you can find it again. I would recommend that you save it to C:\ybpro32\ybtemp directory in case it is needed in the future.
3. Close all open programs including Yachtbroker then using windows explorer double click onto the downloaded file YB2kv30.zip to open it this should open winzip. If your version of winzip is unregistered then you will have to agree to the licence info before the main winzip panel opens. Select all the files in the main panel by selecting the menu actions and then choosing the option 'Select All' When all the files are highlighted click on the toolbar button 'Extract'. In the next window type in the field Extract To: the following C:\ybpro32 then press the extract* button (*This may be something different on some old versions) Agree to overwriting the existing files. Then close winzip after it has completed.
4. Now run Yachtbroker from the icon. After the logon it should boot up into the installation wizard. Select the correct option for your situation but please be careful, if you are not sure check with Marine & leisure that you are selecting the correct option as you will probably require contacting us at the next section anyway. In the next window will appear has two fields one with a number in it, the other blank. At this time you need to phone the number below quoting us the number in the first box and your three letter office code. We will then in return issue you with an installation code to be typed into the blank box. Afterward press the next button to view the next page.
5. On this page select the drive in which the data files are located. In most cases this will be the C: drive (WARNING: All networks will have one machine designated as the server or data storage machine, therefore all the other machines must select the drive letter fixed for this machine for example F, G, H, but not C:. You then may be asked to type your company name in the next blank box do so but use upper and lower case (Example, Marine & Leisure Solutions). Press next/ OK again at the name check if you are happy that your name is correct. You will then get two messages inviting you to unzip some additional files. Click on unzip then close on each one. Finally check to see if the correct version is shown on the switchboard. Your Update should now be installed.
